Brilliant Solutions for the Environment

Gardner Glass Products manufactures Dreamwalls Color Glass in accordance with industry ASTM standards and makes a commitment to reduce negative environmental impact during production.

The paint used for Dreamwalls Color Glass' brilliant color is lead-free and isocyanate-free. VOCs produced during manufacturing are burned off during the heat-curing process, which reduces toxic outgassing in the environments in which it is installed. Dreamwalls Color Glass reflects natural light into spaces and reduces the need for artificial light sources due to its reflective properties. Furthering its commitment to the environment, Dreamwalls Color Glass' installations can be created using mechanical fasteners to reduce the use of mastics and adhesives at the job site. Gardner Glass Products has distribution and production facilities across the U.S. to further reduce stress on the environment due to product transport. Dreamwalls Color Glass can contribute towards LEED credits. For more information on Dreamwalls Color Glass and how they can contribute towards LEED credits, contact Gardner Glass Products.
